

October 15, 1999

Mr. Rodney M. Stockton
Aloe #1 Laboratories,
P.O. Box 100069
Ft. Lauderdale, FL 33310-5064

Dear Mr. Stockton:

I was diagnosed with Lung cancer in July 1995 and soon afterward, as you know, I contacted you for help.

Having lived in south Florida during the 1950's I knew of your work with the Aloe Vera plant and that your corporation was the first ever to stabilize its "gel" in an ointment for national distribution (your pharmaceuticals, sun tan preparations and cosmetics).

Of greater significance, I later learned, was your research and clinical testing of the Aloe Vera gel's healing properties in relation to burn victims and cancer patients. Upon further investigation I learned that after years of analysis, testing and comparison studies of the many different species and varieties of Aloe, your corporation had developed and isolated an Aloe Vera plant which produces "gel" of a consistently greater healing potency than others--i.e. the Barbadosis-Miller-Stockton specie, cultivated exclusively by Aloe #1 Laboratories, Inc.

I also learned that this specie of Aloe Vera gel has been highly successful in treating and reversing terminal cancer, including malignancies of the colon, brain and lung, and that many of these cases have been clinically tested, monitored and documented in some of the nation's leading medical publications.

When I found out that the fresh-frozen Aloe Vera gel--Barbadosis-Miller-Stockton specie--was available from Aloe #1 Laboratories, Inc., in 5 gallon containers, shipped by UPS to cancer patients throughout the United States, I contacted you immediately! Since my first shipment, I've been drinking at least two glasses a day and never want to be without it.

Some of my closest relatives felt strongly that I shouldn't totally forego the traditional cancer treatment. So, in August 1995, I became a patient at the Herman D. Kerman Regional Oncology Center, Halifax Hospital, Daytona Beach. After several radiation treatments and just four months of intermittent chemo-therapy, my X-rays showed no cancer, which my oncologists exclaimed was "amazing" and "remarkable". To date, no cancer. It has been "in remission" over four years now.

We know you have received recognition and many tributes, Mr. Stockton, for your tireless pioneering work with the Aloe Vera. There are those of us, free from cancer, today who believe you have been divinely inspired in this humanitarian endeavor, of such great benefit to so many.

With enduring gratitude to you and all those involved with your profoundly significant work...

Sincerely,

Janice F. Jones
(Mrs. Foster L. Jones)
